In statistical mechanics, entropy is an extensive property of a thermodynamic system. It is closely related to the number Ω of microscopic configurations (known as microstates) that are consistent with the macroscopic quantities that characterize the system (such as its volume, pressure and temperature). Under the assumption that each microstate is equally probable, the entropy is the natural ...

Entropy - Wikipedia

Entropy production (or generation) is the amount of entropy which is produced in any irreversible processes such as heat and mass transfer processes including motion of bodies, heat exchange, fluid flow, substances expanding or mixing, anelastic deformation of solids, and any irreversible thermodynamic cycle, including thermal machines such as power plants, heat engines, refrigerators, heat ...

Claude Shannon himself seems to be aware of these differences in his famous 1948 paper, "A Mathematical Theory of Communication". With respect to the parcelling he writes, "In the continuous case the measurement is relative to the coordinate system. If we change coordinates the entropy will in general change" (p 37, Shannon's italics).
