What is evolution? • Evolution is a result: heredity + variation • "Descent with modification" • Fact: evolution has occurred • Began as a hypothesis • Not falsified, though falsifiable • Theory: evolution is a body of explanatory principles • Embodies a mechanism: natural selection, itself a result of: • Variation in fitness (ability to survive to reproduce)

### **Molecular & Cell Biology - nyu.edu**

The definitive text in cell biology. As the amount of information in biology expands dramatically, it becomes increasingly important for textbooks to distill this vast amount of scientific knowledge into concise principles and enduring concepts.

### **Molecular Biology of the Cell (Sixth Edition): Bruce**

In molecular cloning, a vector is a DNA molecule used as a vehicle to artificially carry foreign genetic material into another cell, where it can be replicated and/or expressed (e.g.- plasmid, cosmid, Lambda phages). A vector containing foreign DNA is termed recombinant DNA. The four major types of vectors are plasmids, viral vectors, cosmids, and artificial chromosomes.

Directionality, in molecular biology and biochemistry, is the end-to-end chemical orientation of a single strand of nucleic acid. In a single strand of DNA or RNA, the chemical convention of naming carbon atoms in the nucleotide sugar-ring means that there will be a 5'-end, which frequently contains a phosphate group attached to the 5' carbon of the ribose ring, and a 3'-end (usually ...

Restriction enzymes have proved to be invaluable for the physical mapping of DNA. They offer unparalleled opportunities for diagnosing DNA sequence content and are used in fields as disparate as criminal forensics and basic research. In fact, without restriction enzymes, the biotechnology industry would certainly not have flourished as it has.
