Computer science is the theory, experimentation, and engineering that form the basis for the design and use of computers. It involves the study of algorithms that process, store, and communicate digital information. A computer scientist specializes in the theory of computation and the design of computational systems.. Its fields can be divided into a variety of theoretical and practical disciplines.

- Computers and hardware have one giant limitation. They can't do anything until they are told exactly what to do. That critical ingredient is where the programmer and coder comes in, to tell the computer what to do. From the very first theoretical computer, there was the need to come up with a way to give instructions, or steps for the computer to complete.

Computer science is the study of the theoretical foundations of information and computation and their implementation and application in computer systems. Computing science encompasses many branches; some emphasize the computation of specific results (such as computer graphics), while others (such as computational complexity theory) relate to properties of computational problems.
