In mathematics and computer science, an algorithm (/ ɛː ˈ ɔː l ɪ ˈ ɛ j ˈ ɛ t m r ɛ ˈ ɔː ˈ ɛ t m / ()) is an unambiguous specification of how to solve a class of problems. Algorithms can perform calculation, data processing, and automated reasoning tasks.. As an effective method, an algorithm can be expressed within a finite amount of space and time and in a well-defined formal language for calculating a function.

Random forests - classification description

A multiobjective optimization problem involves several conflicting objectives and has a set of Pareto optimal solutions. By evolving a population of solutions, multiobjective evolutionary algorithms (MOEAs) are able to approximate the Pareto optimal set in a single run.
